Pennsylvania	17891	Laimet Screw Chipper Model HP-21: Like new! Only 1 hour. Max. wood diam. 170 mm Feeding throat 210 x 315 mm Power source 90 kW tractor (min.) Quantity of chips up to 40 m <sup>3</sup> / hour with speed of rotation 540 rpm Weight of the machine 1100 kg PTO Rotation speed 540...1000 rpm Reliable basic chipper for agricultural and forestry use as well contract chipping. The heart of the chipper is the conical screw blade. The Laimet HP chippers uses a conical screw blade, which efficiently produces splinter free even quality chips. The rotating screw blade also functions as a feed unit so that a separate feed is unnecessary. The LAIMET is a tractor or diesel powered chipper of remarkably simple construction. It has few parts that wear. It is reliable in operation and needs little maintenance. The heavy fly-wheel evens out the load on the motor used.	\$11,900.00 <i>Reduced</i>
Pennsylvania	18035	58" Morbark Chip Pack. Many new parts. Currently operating.	\$25,000.00

Minnesota	19148	PH360 4 headed Planer Moulder: The PH360 is a planer/moulder that can work four sides of a workpiece in one action. The planer/moulder is contained in a stable and strong chassis. The planer/moulder table and slide for the moving cutter are made of planed cast iron. The workpiece is fed, lying on the planer table, through the planer by four feed rollers as well as an outfeed roller. The rollers are driven by a chain transmission with separate motor. The workpiece is controlled laterally with adjustable fences and pressure rollers. The work is done using a top cutter and a bottom cutter, that are hung at both ends, as well as two side cutters which are fixed to the planer table. All the cutters are driven by separate motors, via a belt transmission. The cutters and feed rollers are covered by a foldable protective cover plate with window. The cover plate is supplied with a safety switch. Another safety switch sits behind the top edge of the cover plate on the infeed side. A 100 mm (4") hose is connected to the bottom and side cutters and a 125 mm (5") hose is connected to the top cutter with the option of an additional 100 mm (4") for connection to the chip extractor.	\$16,000.00

STATE	AD #	Resaws, Circular	PRICE (U.S.)

Minnesota	19147	KS150 Resaw: Designed for small-scale wood processing. With the Circular Resaw KS-150 you get timber of exact dimensions. The cutting speed is adjustable and can be set so you can manage the job entirely on your own. The resaw saves time when you want to produce planed products of many different dimensions. This machine is especially designed for small-scale wood processing. It can do the same job as a larger, industrial resaw, but at a much better price. You get a reliable machine that is easy to use. The resaw can handle both fresh-cut and dried timber with great precision. You can always be sure of getting the correct dimensions and a fine surface on your sawn products. Save time by cutting larger dimensions on your sawmill and then resaw the timber into the right dimensions for panelling and moulding workpieces. High precision - low investment Fine sawn surface and accurate dimensions due to stable design, strong in-feed and circular sawblade that is driven by a large motor. Can handle large dimensions, 150 mm cutting height. Can be moved with a pallet lifter. Designed for maximum work safety. You work securely with safe technology. Durable sawblade. The sawblade lasts for tens of thousands of metres. Once it is time for sharpening the blade, you replace it in a couple of simple operations.	\$8,000.00
STATE	AD #	Resaws, Components	PRICE (U.S.)
Indiana	18801	Baker runaround system for a resaw with return (not resaw), electric, 3 phase.	\$13,000.00
